MEANS OF CONTROL

Generally we control the quality of our safety footwear as follows:

1/ we will test some important items, such as impact, compression, slip resistance during development of products.

After all properties can meet the requirement, then we will put them into mass production;

2/ We will ask our raw material supplier to provide us good reports, for example, we need good report for impact, compression for toecaps; for penetration resistance insert, we need report for penetration and flex resistance; and for leather we need report for tear strength, tensile strength, WVP and Cr VI. All report must be in accordance with correct standard, such as EN ISO 22568 for toecaps and insert; EN ISO 20345:2022 for upper materials.

3/ Our QC will make sure that the quality check must be performed strictly for each step. From cutting, stitching, lasting, injection and cleaning, if some problems are found, we must solve them at once in order that the good quality shoes can be produced smoothly;

4/ We will pick up some finished shoes from warehouse at random , and send them to testing company to perform impact, compression, slip resistance (basic requirement+SR), penetration resistance and Cr VI of leather per each Batch.

5/ Before shipment, we will ask our QC to carry out final inspection randomly. The whole goods can be delivered when the result of inspection is positive.

PPE subject to ageing :

The design performance of this product can be affected by ageing. The peremption period is estimated at 5 years when stored in appropriate conditions (humidity, temperature, clean , ventilated, light). Before use, the footwear shall be visually controlled, in case of deterioration the footwear must be scrapped (abrasion, cut, tear...).
